

# July 2019

## July 19 2019

Mwanafunzi is listing nvidia-docker, docker-ce, and nvidia-docker-runtime as upgradable packages. Currently, since I am away from home and using this machine extensively, I will not be upgrading these packages. Do not upgrade them until a better solution using btrfs snapshots can be put in place (with redundant boot drives).

## July 20 2019

Rebuilt sharelatex from docker-compose files so that it uses the correct hostname. This only became an issue when doing external signups.

I tried to set up smtp with sharelatex so that password resets could be automated but I did not have much luck in getting it set up.

## July 21 2019

Running parsing genie on google cloud with port 80 requires running as root since listening on that port is reserved for root by default.

## July 23 2019

Git annex sync --content on newly cloned repositories is not working at the moment. It is first saying that

## Zen 2 build
