Interrogative adjectives

It may seem strange but **gani** is treated as an interrogative adjective in the Helsinki corpus of Swahili and by Mohammed (2001). This is probably due to analogy with **-pi** and **-ngapi** which are both inflected with adjectival concord.

Hashtags need to be rejoined

The tokenizer used split pound signs from the rest of the hash tag: #NairobiBlast -> # NairobiBlast.

These should all be rejoined.

-ote

-ote meaning 'all' is nearly always labeled as adv instead of det like it should be.
